
declared 12-port carrier architecture
presentation-invariant, architecture-sensitive
federation of self-reading supports
records, feedback, checkpoints, accepted repair
one public normal form
schedule-independent only under the consensus receipts
geometry and gravity
causal-poset grammar + 1+3 precursor; exact compatibility controls
any finite strict poset compiles; height = longest parent chain; ℝ ⊕ rank-3 → dim 4
auxiliary order→cone; exact candidate needs edge speed + two separation checks
9 balances → Einstein shape on a separate supplied tensor interface
#I/ρ + refinement + independent dimension + manifold/topology: conditional
→ effective 3+1 / smooth GR, conditional
currents and matter
physical-current attachment required
A5 port response → compact current
Standard Model Lie type
matter and QFT, conditional
one source-bound observer world
route identity, attachment, and inhabited-tower receipts are required
